Content Type Distribution

Quick Insights –

- Netflix's offerings are broadly divided into two formats: Movie and TV Show.
- Movies make up the majority of the catalog with ~69% of the total content.
- TV Shows form a smaller share in comparison with ~31% of the total content.

Recommendations:

- Maintain movies as the backbone to attract casual and global audiences.
- Expand TV shows strategically to strengthen engagement and retention.

Release Date Distribution

Number of Releases per Year (Last 25 Years)

Quick Insights –

- The highest release counts are in 2018 (1147), 2017 (1032), 2019 (1030), and 2020 (953).
- This indicates a significant surge in content production in the last 5–6 years, likely due to platform growth and increased user demand.
- Years before 1995 (and even many between 1995–2015) show very low counts, often single digits, reflecting either limited platform acquisitions or historical scarcity of digital content.

Recommendations:

- Allocate more production resources in line with the surge seen in 2017–2019, as this appears to align with user demand growth.
- Use this release pattern to forecast next year's content needs, balancing quality and quantity to maintain user engagement.

Genre

Recommendations:

- Focus marketing and recommendation algorithms on International Movies, Dramas, Comedies, and Action & Adventure, which attract the largest audiences
- Since International Movies dominate, explore regional content strategies to further engage viewers.

Quick Insights –

- International Movies (2624 titles), Dramas (1600), and Comedies (1210) dominate the dataset, showing a strong focus on broad appeal and story-driven content.
- Action & Adventure (859) and Documentaries (829) also have substantial representation, indicating diverse content types.
- Some genres like Romantic Movies (3), Spanish-Language TV Shows (2), LGBTQ Movies (1), and Sports Movies (1) are extremely underrepresented.
- This indicates that while the platform has mass-appeal content, niche audiences have limited options.

Releases on a day of the Week

Quick Insights –

- Friday has the highest number of releases (2475), almost double that of Thursday, indicating that platforms prefer launching new content at the end of the workweek.
- This aligns with typical user behavior, as weekend viewership increases, giving content maximum exposure.
- Tuesday, Wednesday, and Thursday also have significant releases, showing that platforms distribute content throughout the week, possibly to maintain daily engagement.

Recommendations:

- Continue prioritizing Friday releases for high-profile titles to maximize weekend viewership and social media buzz.
- Consider Thursday or Wednesday releases for mid-tier or niche content to maintain consistent engagement throughout the week.
